1. (10 pts) **True/false questions.** For each of the statements below, decide whether it is true or false. Indicate your answer by shading the corresponding box. There will be no partial credit.

(a) Let $W$ be a subspace of $\mathbb{R}^n$. $W$ and $W^\perp$ have no vector in common.  

(b) If $A \in M_{n \times n}$ is similar to a diagonal matrix, then $A$ has $n$ distinct eigenvalues.

(c) The zero vector is contained in any eigenspace and is hence an eigenvector.

(d) Similar matrices have the same eigenvalues.

(e) It is possible for $A \in M_{5 \times 5}$ to have 5 complex eigenvalues.
2. (12 points) Set \( \mathbf{w}_1 = \begin{bmatrix} 2 \\ 2 \\ 1 \end{bmatrix}, \mathbf{w}_2 = \begin{bmatrix} -1 \\ 2 \\ -2 \end{bmatrix}, \) and \( \mathbf{v} = \begin{bmatrix} 1 \\ 0 \\ 0 \end{bmatrix}; \) then \( \{\mathbf{w}_1, \mathbf{w}_2, \mathbf{v}\} \) is a basis of \( \mathbb{R}^3 \) (you don’t have to verify this). Let \( W \) be the plane in \( \mathbb{R}^3 \) spanned by \( \{\mathbf{w}_1, \mathbf{w}_2\} \).

(a) Verify that \( \{\mathbf{w}_1, \mathbf{w}_2\} \) is an orthogonal set.

(b) Verify that \( \{\mathbf{w}_1, \mathbf{w}_2, \mathbf{v}\} \) is not an orthogonal set.

(c) Find a vector \( \tilde{\mathbf{v}} \) in \( W \) and a vector \( \mathbf{x} \) in \( W^\perp \) such that \( \mathbf{v} = \tilde{\mathbf{v}} + \mathbf{x} \).

(d) Find a vector \( \mathbf{w}_3 \) such that \( \{\mathbf{w}_1, \mathbf{w}_2, \mathbf{w}_3\} \) is an orthogonal basis of \( \mathbb{R}^3 \).
3. (14 points) Let \( A = \begin{bmatrix} 2 & 0 & 1 & 2 \\ 1 & -1 & 0 & 0 \\ 0 & 2 & 1 & 2 \end{bmatrix} \).

(a) Find the solution set to the matrix equation \( Ax = 0 \). Express your answer in vector parametric form.

(b) Find a basis for \( \text{Nul}(A) \).

(c) Give the dimension of \( \text{Col}(A) \) (justify your answer).

(d) Do the columns of \( A \) span \( \mathbb{R}^3 \)? Why or why not.
(e) Consider the linear transformation \( T(x) = Ax \). Is \( T \) onto? Why or why not.

(f) Is \( T \) one-to-one? Why or why not.

4. (5 points) Using any appropriate method, find the inverse of the matrix 
\[
A = \begin{bmatrix}
5 & -2 \\
-3 & 4
\end{bmatrix}.
\]

5. (6 points) Given that \( A, B, C \) are \( n \times n \) matrices with \( \det(A) = -1 \), \( \det(B) = 2 \), and \( \det(C) = 4 \), find the following:
   (a) \( \det(ABC) \)
   (b) \( \det(B^T C^T) \)
   (c) \( \det(C^{-1}B) \)
6. (6 points) Let $V = \mathbb{M}_{2 \times 2}$ be the set of all $2 \times 2$ matrices. Let $H$ be the subset of all matrices in $V$ which have rank less than or equal to 1. Is $H$ a subspace of $V$? If your answer is “yes”, give a proof of your assertion. If your answer is “no”, give a counterexample that shows $H$ cannot be a subspace of $V$. 
7. (8 points) Let $u_1, u_2, u_3$ be 3 linearly independent vectors in $\mathbb{R}^5$, and let $H = \text{span}\{u_1, u_2, u_3\}$. Let $W = \text{span}\{u_1, u_2, u_1 + u_2 + u_3\}$. Show that $W = H$ by completing the following.

(a) Show that an arbitrary element in $H$ must be an element of $W$.

(b) Show that an arbitrary element of $W$ must be an element of $H$. 
8. (8 points) Let \( A = \begin{bmatrix} 1 & 2 \\ -1 & 4 \\ 1 & 2 \end{bmatrix} \) and \( b = \begin{bmatrix} 3 \\ -1 \\ 5 \end{bmatrix} \).

(a) Verify that the system \( Ax = b \) is inconsistent.

(b) Compute the least squares solution to \( Ax = b \).
9. (12 points) Let $V$ and $W$ be vector spaces and let $T : V \rightarrow W$ be a linear transformation.
   (a) Using set notation, give the definition of $\ker(T)$.

(b) Prove that $\ker(T)$ is a subspace of $V$.

10. (6 points) Suppose $T : \mathbb{P}_3 \rightarrow \mathbb{P}_3$ is linear and $B = \{1, t, t^2, t^3\}$.
    Given that $[T]_B = \begin{bmatrix}
2 & 0 & -1 & 1 \\
1 & 0 & 1 & 1 \\
2 & -3 & 0 & 2 \\
1 & 1 & 1 & 0
\end{bmatrix}$, find $T(3 - 2t + t^3)$. 
11. (8 points) Let $A$ be a $4 \times 4$ matrix with 4 distinct eigenvalues. One of those eigenvalues is 0.
   (a) Is $A$ diagonalizable? Why or why not.

   (b) Is $A$ invertible? Explain your reasoning.
12. (5 points) Let $A$ be a non-zero square matrix (which is not the identity matrix) such that $A^2 = A$. Show that the eigenvalues of $A$ are either 0 or 1.
